ON AIR. SINCE 1955

With a reversible motor box, the new 14" rise Scirocco Plus can fit behind a range top, cook top or range.

Rising a full 14" above the cooktop, the Scirocco Plus vents horizontally across the cooking surface and down through the exhaust vent. At the press of a button, the stainless steel Scirocco Plus retracts back down into the counter.

Momentary delay up/down button prevents the unit from raising or lowering when cleaning the top trim.

Up / down motor on 14" rise range hood stops automatically if an object or finger obstructs its path.

Safety microswitches on the grease filters prevent the Scirocco Plus from lowering when grease filters are not installed.

Dimensional Diagrams

Note: Overall dimensions show unit with internal blower box attached. Remote
Blower would only have a vent collar attached instead of the 13" x 13" box shown.

X = Distance to the rear of the cabinet

The state of the cabinet or wall. Must be a minimum of ½".

When mounted on the front of the hood, the Internal blower box can be rotated to vent left, right, down or thru the hood to the rear of the unit. When mounted on the back of the hood, the blower can be vented left, right or down. The remote blower venting can come out the front or back of the unit venting down.

Cutout Dimensions

Product Side View (motor on the front and back)

WARNING! You must know the cook top cutout to determine the downdraft cutout. Consult the cook top manufacturer's installation instructions before cutting the counter top.

WARNING! Product specifications are subject to change without notification. Consult the installation instructions for both the remote blower and the ventilation system before you begin installing this rangehood.
