DATA SHEET SERVICI

FRIGIDAIRE

P/N: 808936658

After Cancel, press pad Heavy and Fast simultaneously for at least 4 seconds to access Service Mode.

LED Heavy, Led Normal and Led Fast blink to indicate that Service mode is accesed.

After accessed Service mode (Led Heavy, Led Normal and Led Fast blinking):

- 1. Press pad Heavy to show the first alarm code.
- Led Heavy blinks to indicate the machine is in Alarm
- The first alarm code saved is shown in the display. For descriptions of alarm codes, please see Alarm Codes
- 2. Press pad Heavy again to show the second alarm code.
- 3. Press pad Heavy once more to show the third alarm code.
- 4. Press pad Heavy the fourth time to move to Actuator Test. Press pad repeatedly will sequentially turn on one actuator at a time.
- Led Heavy is turned off. led Normal blincks to indicate the machine is in Actuator Test.
- The actuator number is shown in the display, see the following table for details.

Number of pad Heavy pressed		Actuator	
4	4	Regeneration Valve	
5	5	Drain Pump	
6	6	Inlet Valve	
7	7	Heater	
8	8	Wash pump	
9	9	Dispenser	
10	10	Dry Fan	

- 5. Press pad Heavy when actuator number 10 is activated, the machine will cycle back to Alarm reading and show the first alarm code saved.
- 6. The mode can be exit by pressing the CANCEL button, or waiting 60 seconds after last button pressing.

LED Test/Delete Alarm Memory

After accessed Service mode (Led Heavy, Led Normal and Led Fast blinking):

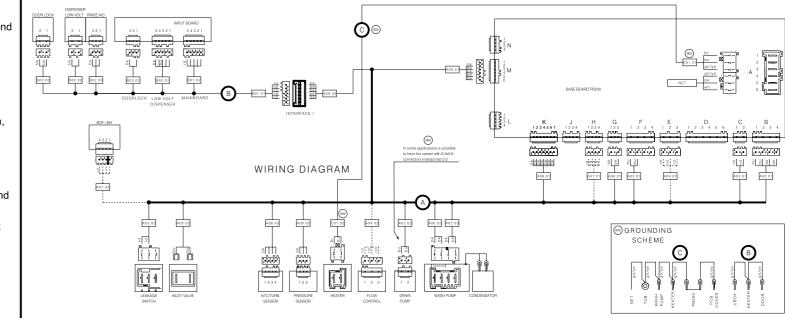

- 1. Press pad Normal to start this function.
- All LEDS and display blinks 5 seconds on 1 second off.
- Buzzer beeps 5 seconds and then off.
- The alarm codes saved in memory are erased.
- 2. The mode can be exit by pressing the CANCEL button, or waiting 60 seconds after last button pressing.

Functional Test cycle

Service Mode

After accessed Service mode (Led Heavy, Led Normal and Led Fast blinking):

- 1. Press pad Fast to start the test cycle. The cycle will not start if door is opened.
- LED Normal blinks all the way through the whole cycle, even if after the cycle is finished
- -The test cycle runs as a normal wash cycle. It can be cancelled or run to its end.

Tub Gasket

The door gasket is pressed into the tub channel | Starting a Cycle Open door, select the cycle and options: then for an interference fit. To install the gasket:

- 1. Press the gasket across the header using your hands.
- 2. Press the gasket while stretching around the corners .

NOTE: There should be no wrinkles or puckers in the corners.

3. Place the gasket end at the bottom and then press the gasket in from the bottom up.

Detergent and Rinse Aid Dispenser

The detergent and rinse aid dispenser is a one piece component consisting of a molded detergent cup and a built-in rinse aid dispenser.

The detergent cup has a spring loaded cover and the rinse aid dispenser has a cover.

Liquid rinse aid is added to the dispenser up to the fill line indicator. The amount of rinse aid released can be adjusted from 1, being the least amount, to 6, being the greatest amount.

To replace dispenser:

- · shut off electricity to dishwasher,
- · remove outer door panel assembly,
- · disconnect wiring to the actuator,
- · remove the six screws,
- · remove the dispenser,
- replace and reinstall screws,
- · rewire actuator.

Display Codes (LED)

press the "START-cancel" pad. The LED over

the selected cycle pad will then flash. Close

Open door, select the cycle and options; ther

press the "DELAY" pad. Each press of the

pad will increase the delay time by 1 hour

Symptom

the door and the cycle will begin.

Trouble Shooting Tips

A WARNING

Personal Injury Hazard

Always disconnect the dishwasher from the electrical power source before adjusting or replacing components.

Check the Following

	<u>- </u>	_	•
Open door, select the "START-cancel" pad then close the door. The unit will then drain and end the cycle.	Dishwasher will not operate when turned on.	Fuse (blown or tripped). 120 VAC supply wiring connection faulty. Electronic control board defective.	Replace fuse or reset breaker. Repair or replace wire fasteners at dishwasher junction box. Replace control board.
Open door, select the desired cycle and options; then press the "START-cancel" pad and close the door. The cycle will begin.		 No 12 VAC power to control. Motor (inoperative). Door switch (open contacts). Door latch not making contact with door switch. 	 Replace control board. Replace motor/impeller assembly. Replace latch assembly. Replace latch assembly.
Is Open door and hold down the "DELAY" pad for 3 seconds. The status window will display "loc" and the pads will be unresponsive.		Touch pad circuit defective. No indicator lamps illuminate when START or OPTIONS are pressed.	Replace console assembly. Replace console assembly.
To unlock the control hold the "DELAY" pad down for 3 seconds until "loc" goes out. Normal function will resume.	Motor hums but will not start or run.	Motor (bad bearings). Motor stuck due to prolonged non-use.	Replace motor assembly. Rotate motor impeller.
odes/Description	Motor trips out on internal thermal overload protector.	Improper voltage. Motor windings shorted. Glass or foreign items in pump.	Check voltage. Replace motor/impeller assembly. Clean and clear blockage.
Description			
Water Tap Closed	Dishwasher runs but will not heat.	Heater element (open). Electronic control board defective. Wiring or terminal defective. Hi-Limit thermostat defective.	 Replace heater element. Replace control board. Repair or replace. Replace thermostat.
Draining Problem		4. Th-Limit thermostat defective.	4. neplace memostat.
Aqua Control	Detergent cover will not latch or open.	Latch mechanism defective. Electronic control board defective. Wiring or terminal defective.	 Replace dispenser. Replace control board. Repair or replace.
Analogue pressure sensor problem		4. Broken spring(s). 5. Defective actuator.	Replace dispenser. Replace dispenser.
Washing Motor Problem	-		· ·
Heating Element Problem	Dishwasher will not pump out.	 Drain restricted. Electronic control board defective. Defective drain pump. 	 Clear restrictions. Replace control board. Replace pump.
Thermistor problem		 Blocked impeller. Open windings. 	 Check for blockage, clear. Replace pump assembly.
Auto Door Opener		 Wiring or terminal defective. Defective Drain Valve. 	 Repair or replace. Repair or replace.
Configuration Problem	Dishwasher will not fill with water.	Water supply turned off.	Turn water supply on.
Sensor Problem		Defective water inlet fill valve. Check fill valve screen for obstructions.	Replace water inlet fill valve. Disassemble and clean screen.
Communication problem		Defective float switch. Electronic control board defective.	Repair or replace. Replace control board.
Tacho problem		6. Wiring or terminal defective.7. Float stuck in "UP" position.	6. Repair or replace.7. Clean or replace float.
Flow controller problem	Dishwasher water siphons out.	Drain hose (high) loop too low.	Repair to proper 32-inch minimum height.
Water level problem		Drain line connected to a floor drain not vented.	2. Install air gap at counter top.
	1	Drain valve or pump stuck open.	3. Repair or replace.
pply	Detergent left in dispenser.	Detergent allowed to stand too long in dispenser.	1. Instruct customer/user.
d minimum incoming water		Dispenser wet when detergent was added.	2. Instruct customer/user.
re 120°F (49°C) (PSI) min./max 20/90		Detergent cover held closed or blocked by large dishes.	Instruct customer/user on proper loading of dishes.
n (GHT)3/4" 11.5NH		Improper incoming water temperature to properly dissolve	 Incoming water temperature of 120°F is required to properly
tion (Normal Cycle)		detergent. 5. Spray arm blocked.	dissolve dishwashing detergents. 5. Instruct customer/user.
ve flow rate (U.S. GPM) 0.66		6. Is water getting into unit.	6. Check fill valve repair or replace.
iroulation rate (LLC CDM)	I		

Note: See "Detergent cover will not latch or open."

808936658 -A 04/2015

Pump Assembly

The circulation pump is driven by a permanent split-capacitor asynchronous induction motor. When looking into the inlet hose, the impeller rotates in the counter-clockwise direction when 120V 60 Hz AC voltage is applied. The motor drives the pump, supplying 100% filtered water at a rate of approximately 17 GPM to all three spray arms at once. At this full-wave mains voltage and flow-rate, the motor speed is approximately 2900

Draining is accomplished by using a smaller, separate, synchronous drain pump motor mounted to the sump. The drain pump is connected to the sump directly.

A rubber check valve flap is inserted at the

discharge end of the drain outlet pipe, which is integrated on the sump.

A raised drain hose loop section is routed on the side of the unit to help prevent/limit back flow out of the dishwasher. No additional such loops are required.

The main circulation pump is removed by disconnecting both attached clamps and hoses, disconnecting the wiring harness to the pump assembly, un-strapping the pump out of the rubber mount in the basement, and disconnecting the running capacitor. Wire harness connections include 2 earth tabs, motor connector, heater connector and the 2 terminals of the running capacitor.
