Upright Freezer Specifications

- Product Shipping Weight (approx.) 191 Lbs.
- An electrical supply with grounded three-prong receptacle is required. The power supply circuit must be installed in accordance with current edition of National Electrical Code (NFPA 70) and local codes & ordinances.
- Voltage Rating –120V
- Connected Load (kW Rating)@120 Volts = 0.6 kW
- Amps@120 Volts = 5 Amps
- Always consult local and national electric codes.
- For adequate air circulation, allow 3" minimum clearance on all sides and top with 1" at bottom.
- When installing freezer adjacent to wall, cabinet or other appliance that extends beyond front edge of unit, 20" minimum clearance recommended to allow for optimum 140° door swing, providing complete basket access and removal. (Absolute 3' minimum clearance will ONLY allow for 90° door swing which will provide limited basket access with restricted removal.)
- Locate where surrounding air temperature will not exceed 110° F, to ensure optimum performance. (Temperatures 32°F and below will NOT affect operation.)
- All bottom corners of unit MUST rest firmly on solid level surface of hard material, same height as flooring. Surface must be strong and stable enough to support unit when fully loaded.
- · Equipped with adjustable leveling legs to ensure unit is level, which is required in order to function properly.

Note: For planning purposes only. Refer to Product Installation Guide on the web at frigidaire.com for detailed instructions.
