## ELECTRICAL REQUIREMENTS

115 volt, $60 \mathrm{~Hz}, \mathrm{AC}$ only, 15- or 20-amp fused, grounded circuit is required. A dedicated circuit is recommended. Use an outlet that cannot be turned off by a switch.
Minimum length of power cord is 60" (152.0 cm). Do not use an extension cord.

## WATER PRESSURE REQUIREMENTS

A cold water supply with water pressure between 30 and 120 psi (207 and 827 kPa ) is required to operate the water dispenser and ice maker. Call a licensed, qualified plumber with any questions about the water pressure.

## Reverse Osmosis Water Supply

IMPORTANT: The pressure of the water coming out of a reverse osmosis system going to the water inlet valve of the refrigerator needs to be between 30 and 120 psi ( 207 and 827 kPa ).
If a reverse osmosis water filtration system is connected to the cold water supply, the water pressure to the reverse osmosis system needs to be a minimum of 40 to $60 \mathrm{psi}(276$ to 414 kPa$)$.
