**Electrical:** A 115-Volt, 60-Hz, AC-only, 15- or 20-amp fused, grounded electrical supply is required. It is recommended that a separate circuit serving only your refrigerator be provided. Use an outlet that cannot be turned off by a switch. Do not use an extension cord.

Water Supply: A cold water supply with water pressure of between 30 and 120 psi (207 and 827 kPa) is required to operate the water dispenser and ice maker. If you have questions about your water pressure, call a licensed, gualified plumber.

**IMPORTANT:** The pressure of the water supply coming out of a reverse osmosis system going to the water inlet valve of the refrigerator needs to be between 30 and 120 psi (207 and 827 kPa).

If a reverse osmosis water filtration system is connected to your cold water supply, the water pressure to the reverse osmosis system needs to be a minimum of 40 to 60 psi (276 to 414 kPa).

The cabinet depth refrigerator can be installed into a recessed opening, at the end of cabinets or as a freestanding refrigerator.

Do not install the refrigerator near an oven, radiator, or other heat source, nor in a location where the temperature will fall below 55°F.

### **CABINET OPENING DIMENSIONS**

Height dimensions are shown with the leveling legs extended to the minimum height of ¼" (6.35 mm) below the refrigerator.

**NOTE:** When leveling legs are fully extended to 1" (25 mm) below the refrigerator, add  $\frac{3}{4}$ " (19 mm) to the height dimensions.

■ Minimum fixed wall position is 13¼" (34 cm) from the freezer door and 16½" (42 cm) from the refrigerator door.
