

11. Install locally supplied countertop.

Viking outdoor cabinets are designed for a minimum countertop thickness of 1 1/8" (2.9 cm) such as you would find with granite or quartz material. If a countertop material thicker than 1 1/2" (3.8 cm) is used, the appliances should be shimmed to the proper height. In instances where Viking grills are installed in Viking cabinets against a non combustible surface (such as a house wall), they should be installed with a 3 1/2" (8.9 cm) countertop overhang from the wall to the back of the deepest cabinet. (Refer to grill specifications). If a finished side panel is desired, a SP33 (refer to chart below) should be installed to cover the 3 1/2" (8.9 cm) space that would result behind the deepest cabinet in the cabinet run.

The refrigerator back panel accessory (FBP) is used to provide a solid attachment surface for a side panel, (SP24, SP30, or SP33), and a strong frame for attaching a countertop. If a 15" W. or 24" W. refrigerated beverage center, wine cellar, or ice machine is desired at the end of the cabinet run where any side panel is used, the FBP accessory back panel needs to be used. These panels can be adjusted from 15" to 24" widths simply by unscrewing the four (4) middle screws, sliding the panel in or out and reinstalling the screws. The FBP is attached to the end cabinet at the rear by using 1 1/4" (3.2 cm) self-tapping coarse threaded screws, (provided by installer), into the connection extrusions. The side panel is then attached to the connection extrusions on the other end of the FBP in the same manner. The appliance is placed in front of the connection extrusions at the desired location matching the front of the cabinets. The countertop is then installed.

12. Install Viking appliances per each appliance's installation instructions.
