TO ENSURE OPTIMAL CONSERVATION,
A WINE CELLAR MUST RESPOND TO CERTAIN CONDITIONS.

CONSTANT TEMPERATURE

Temperature is carefully maintained to prevent wine aging too fast or too slow.

NO VIBRATION

Using a matched compressor Vibrations are minimized. Vibrations would cause the wine deposits to be constantly suspended, which would hinder the blossoming of the wine.

HUMIDITY

The refrigeration system is designed to generate the proper levels of humidity, oscillating between 55% and 75%, so that the wine cork does not dry out and the labels are not damaged.

AIR CIRCULATION

Active ventilation, so the temperature is equal between the top and the bottom of the cellar backed with the charcoal filter, ensuring odorless environment.

UV PROTECTION

The glass doors are specially designed to protect your wine from harmful UV rays.

VINO A COLLECTION

SERVICE CELLARS OF MODERN DESIGN WITH EXCEPTIONAL QUALITY

Shelves designed for all bottle formats (750 ml)
