## **30 INCH PRO-STYLE INDUCTION RANGE**

### BIRP34450SS / BIRP34450CSS

## **Contemporary European Design**

Winner of the prestigious iF Design award, Blomberg ranges bring sophistication, thoughtfulness, and cutting-edge technology to the kitchen, harmonizing elegance with chef-worthy functionality with the effortless style your upscale home deserves. This balance is evident in every feature, from the sleek oven handle and sculpted ergonomic knobs to the beautiful LED lights under the bullnose that illuminate the controls and programmable electronic timer.

# In Harmony with Your Life

### **True European Convection**

Blomberg's advanced convection system features an additional dedicated heating element around the cooking fan to circulate warm air evenly, creating a three-dimensional cooking effect that works consistently on every rack. Roasts and casseroles cook faster and more uniformly. Baked goods are evenly browned and beautiful. Multiple dishes cook to perfection at the same time with no mixing of flavors or aromas.

#### Industry-leading Oven Capacity

Blomberg knows you can never have too much room in your oven, especially when you're entertaining. That's why we feature the largest oven capacity available in a 30-inch range, with 5.7 cu. ft. of cooking space to accommodate everything from holiday roasts to full-size commercial baking sheets. Dual interior lights and a large viewing window make it easy to monitor what's cooking.

### Programmable Self-Clean Oven

Time is the ultimate luxury, and Blomberg ranges protect yours with high-tech programmable selfcleaning oven technology that lets you set exactly the right cycle. Set it for three hours, four hours, or five hours depending on the level of cleaning required. There's no need to scrub hard-to-reach surfaces, scrape up stubborn spills, or use harsh chemicals. At the end of the cycle, simply wipe away ash with a cloth.

#### The Innovation of Induction

Always in step with the latest advances, Blomberg offers home cooks the innovative advantages of induction cooking. Preferred by many professionals, induction uses an electromagnetic field below a smooth, easy-clean glass cooktop surface to generate heat directly within the cookware (requires induction-capable steel pots and pans). Faster than radiant heat, induction cooks foods quickly and evenly and offers precise simmering. Once the pan is removed, the cooking zone instantly cools down, making this method extremely safe and energy efficient.

#### Extra-large Cooking Zone

Blomberg electric ranges with sleek solid-surface cooktops offer more than a beautiful appearance and the benefit of effortless cleanup. They feature the versatile advantage of allowing you to create an extralarge, 11-inch cooking zone for fast, efficient cooking in oversize pots and pans of any shape, as well as with stovetop griddles.
