DATA SHE

S

This information is intended for use by persons having electrical and mechanical training and a level of knowledge of these subjects generally considered acceptable in the appliance repair trade. Electrolux Home Products North America cannot be responsible, nor assume any liability, for injury or damage of any kind arising from the use of this Service Data Sheet.

After Cancel, press pad Power Plus and 30 Min Wash simultaneously for at least 4 seconds to access Service Mode. LED Power Plus, Led Normal and Led 30 Min Wash blink to indicate that Service mode is accesed.

Service Mode

After accessed Service mode (Led Power Plus, Led Normal and Led 30 Min Wash blinking):

- 1. Press pad Power Plus to show the first alarm code.
- Led Power Plus blinks to indicate the machine is in Alarm Reading.
- The first alarm code saved is shown in the display. For descriptions of alarm codes, please see Alarm Codes section
- 2. Press pad Power Plus again to show the second alarm code. After accessed Service mode (Led Power Plus Led Normal
- 3. Press pad Power Plus once more to show the third alarm
- 4. Press pad Power Plus the fourth time to move to Actuator Test. will not start if door is opened. Press pad repeatedly will sequentially turn on one actuator at a time.
- Led Power Plus is turned off. led Normal blincks to indicate the machine is in Actuator Test.
- The actuator number is shown in the display, see the following table for details.

Number of pad Heavy pressed		Actuator
4	4	Regeneration Valve
5	5	Drain Pump
6	6	Inlet Valve
7	7	Heater
8	8	Wash pump
9	9	Dispenser
10	10	Dry Fan

- 5. Press pad Power Plus when actuator number 10 is activated, the machine will cycle back to Alarm reading and show the first alarm code saved.
- 6. The mode can be exit by pressing the START/CANCEL button, or waiting 60 seconds after last button pressing.

LED Test/Delete Alarm Memory

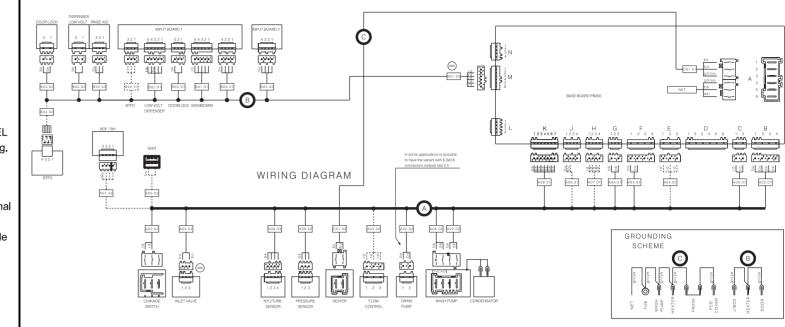

After accessed Service mode (Led Power Plus, Led Normal and Led 30 Min Wash blinking):

- 1. Press pad Normal to start this function.
- All LEDS and display blinks 5 seconds on 1 second off.
- Buzzer beeps 5 seconds and then off.
- The alarm codes saved in memory are erased.
- 2. The mode can be exit by pressing the START/CANCEL button, or waiting 60 seconds after last button pressing.

Functional Test cycle

and Led 30 Min Wash blinking):

- 1. Press pad 30 Min Wash to start the test cycle. The cycle
- LED 30 Min Wash blinks all the way through the whole cycle, even if after the cycle is finished
- -The test cycle runs as a normal wash cycle. It can be cancelled or run to its end.

Tub Gasket

The door gasket is pressed into the tub channel for an interference fit. To install the gasket:

- 1. Press the gasket across the header using
- 2. Press the gasket while stretching around

NOTE: There should be no wrinkles or

then press the gasket in from the bottom up.

Detergent and Rinse Aid Dispenser

The detergent and rinse aid dispenser is a one piece component consisting of a molded detergent cup and a built-in rinse aid dispenser.

The detergent cup has a spring loaded cover and the rinse aid dispenser has a cover.

Liquid rinse aid is added to the dispenser up to the fill line indicator. The amount of rinse aid released can be adjusted from 1, being the least amount, to 6, being the greatest amount.

To replace dispenser:

- · shut off electricity to dishwasher,
- · remove outer door panel assembly,
- · disconnect wiring to the actuator,
- · remove the six screws, · remove the dispenser,
- · replace and reinstall screws,
- · rewire actuator.

Operation

Trouble Shooting Tips

AWARNING

Personal Injury Hazard

Remedy

Always disconnect the dishwasher from the electrical power source before adjusting or replacing components.

Check the Following

Dishwasher will not operate when turned on.	Fuse (blown or tripped). 120 VAC supply wiring connection faulty. Electronic control board defective. No 12 VAC power to control. Motor (inoperative). Door switch (open contacts). Door latch not making contact with door switch. Touch pad circuit defective. No indicator lamps illuminate when START or OPTIONS are pressed.	1. Replace fuse or reset breaker. 2. Repair or replace wire fasteners at dishwasher junction box. 3. Replace control board. 4. Replace control board. 5. Replace motor/impeller assembly. 6. Replace latch assembly. 7. Replace latch assembly. 8. Replace console assembly. 9. Replace console assembly.
Motor hums but will not start or run.	Motor (bad bearings). Motor stuck due to prolonged non-use.	Replace motor assembly. Rotate motor impeller.
Motor trips out on internal thermal overload protector.	 Improper voltage. Motor windings shorted. Glass or foreign items in pump. 	Check voltage. Replace motor/impeller assembly. Clean and clear blockage.
Dishwasher runs but will not heat.	Heater element (open). Electronic control board defective. Wiring or terminal defective. Hi-Limit thermostat defective.	Replace heater element. Replace control board. Repair or replace. Replace thermostat.
Detergent cover will not latch or open.	Latch mechanism defective. Electronic control board defective. Wiring or terminal defective. Broken spring(s). Defective actuator.	Replace dispenser. Replace control board. Repair or replace. Replace dispenser. Replace dispenser.
Dishwasher will not pump out.	 Drain restricted. Electronic control board defective. Defective drain pump. Blocked impeller. Open windings. Wiring or terminal defective. Defective Drain Valve. 	1. Clear restrictions. 2. Replace control board. 3. Replace pump. 4. Check for blockage, clear. 5. Replace pump assembly. 6. Repair or replace. 7. Repair or replace.
Dishwasher will not fill with water.	Water supply turned off. Defective water inlet fill valve. Check fill valve screen for obstructions. Defective float switch. Electronic control board defective. Wiring or terminal defective. Float stuck in "UP" position.	Turn water supply on. Replace water inlet fill valve. Disassemble and clean screen. Repair or replace. Replace control board. Repair or replace. Clean or replace float.
Dishwasher water siphons out.	Drain hose (high) loop too low. Drain line connected to a floor drain not vented. Drain valve or pump stuck open.	1. Repair to proper 32-inch minimum height. 2. Install air gap at counter top. 3. Repair or replace.
Detergent left in dispenser.	Detergent allowed to stand too long in dispenser. Dispenser wet when detergent was added. Detergent cover held closed or blocked by large dishes. Improper incoming water	Instruct customer/user. Instruct customer/user. Instruct customer/user on proper loading of dishes. Incoming water temperature of

temperature to properly dissolve

Spray arm blocked.

Pump Assembly

The circulation pump is driven by a permanent split-capacitor asynchronous induction motor. When looking into the inlet hose, the impeller rotates in the counter-clockwise direction when 120V 60 Hz AC voltage is applied. The motor drives the pump, supplying 100% filtered water at a rate of approximately 17 GPM to all three spray arms at once. At this full-wave mains voltage and flow-rate, the motor speed is approximately 2900

Draining is accomplished by using a smaller, separate, synchronous drain pump motor mounted to the sump. The drain pump is connected to the sump directly.

A rubber check valve flap is inserted at the

discharge end of the drain outlet pipe, which is integrated on the sump.

A raised drain hose loop section is routed on the side of the unit to help prevent/limit back flow out of the dishwasher. No additional such loops are required.

The main circulation pump is removed by disconnecting both attached clamps and hoses, disconnecting the wiring harness to the pump assembly, un-strapping the pump out of the rubber mount in the basement, and disconnecting the running capacitor. Wire harness connections include 2 earth tabs. motor connector, heater connector and the 2 terminals of the running capacitor.
