

NEW FEATURES ON STAINLESS STEEL PANEL KITS

Stainless steel panel kits for Jenn-Air® Fully-Integrated Built-In Refrigerators now have two new features:

- Welded, seamless panel corners for an elegant, smooth appearance
- Conveniently pre-installed parts, like handles and mounting hardware, that save consumers installation time

KITS CAN BE ORDERED TWO WAYS:

COORDINATING PANEL KIT

As an Entire Kit for:

- Consumers who have just purchased a new BIR
- Consumers who have a non-welded corner panel kit and have replacement needs

SUB PANEL KIT

Consumers who already have the entire panel kit with welded corners can order individual replacement pieces, such as a door panel or handle.

* Panel kit can accommodate both right-hand and left-hand door swing base models. Kits come as right-hand swing but can be reversed to left-hand swing.

The Entire Panel Kit Includes:

- Exterior door panels with pre-installed handles and mounting hardware
- Unit access grille with pre-installed mounting hardware
- Installation instructions

INSTALLATION

To install these stainless steel panel kits, consumers should use the hardware that comes with the refrigerator base unit. The bag of hardware can be located in either one of the refrigerator's crisper drawers, or attached to the outside of the refrigerator.

Follow the Installation Guide instructions provided with the coordinating panel kit.

NOTE: Consumers will only need to use a limited number of the parts in the hardware bag to install their stainless steel panels, because some of the components have now been pre-installed on the panel kits.
