

BLOWER TYPE DIAGNOSTIC FAULT CODES

How do I determine the type of blower I have in my monogram vent hood?

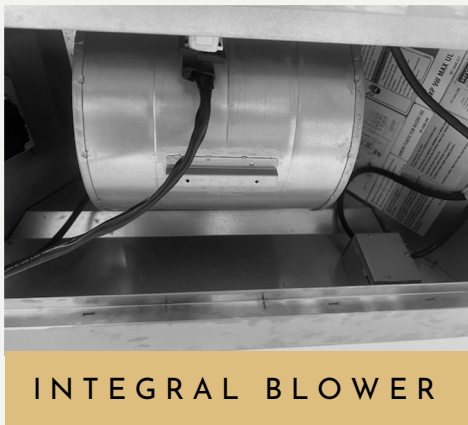

1. Swing open perimeter panel, which is the large rectangular door on the bottom of the hood

Place hand(s) in the large gap between the light and perimeter panels and pull down, which will open the panel like a swinging door

2. Remove the Filters behind the perimeter panel by unlatching and pulling down and out

3. Look up into the hood body to see if a blower is present or not. If a blower is present, you have an integral blower. If a blower is not present, you have an Inline blower

INTEGRAL BLOWER

INLINE BLOWER
